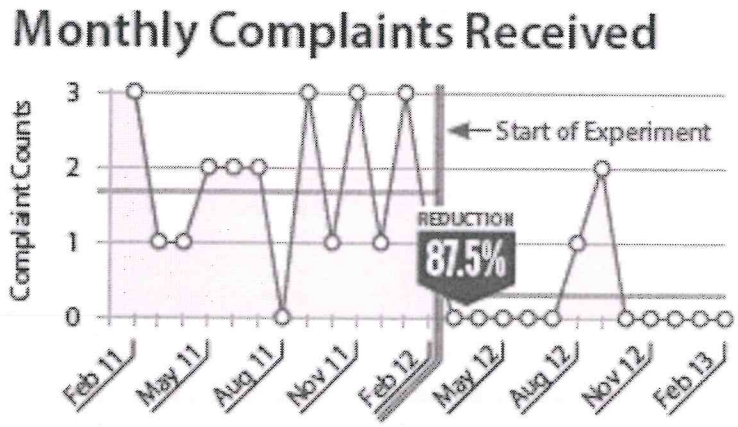
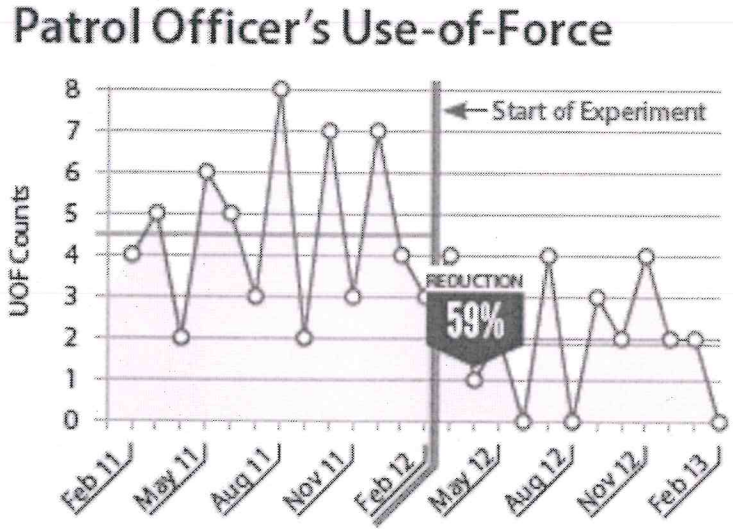
Rialto Case Study / Cambridge University Results

The conclusive results of Rialto PD's extensive controlled study offers compelling evidence as to why body-worn cameras are so vital to law enforcement and the public. During the course of one year, officer complaints fell by 87.5% in the experimental group while interactions with the public increased compared to the previous year.



Rialto PD also focused on their use-of-force data. Officers wearing an Axon flex cameras had 59% less use of force cases than officers without Axon flex cameras. This indicates that the presence of the camera encouraged compliance from the public allowing officers to not escalate to uses of force.



Conclusion

Rialto PD addressed their biggest areas for improvement with one system: TASER'S digital evidence ecosystem. Rialto PD justified the purchase of additional AXON flex camera and EVIDENCE.com licenses using this scientific study. These results are now used educate other agencies on the benefits of body-worn video and cloud-based evidence management.
